RE:

Casitas at la Mariposa

FLO-2D 100-Year Floodplain Model Review

JE Fuller/Hydrology & Geomorphology, Inc. (JE Fuller) has prepared this Memorandum to summarize our review of a FLO-2D model and related information prepared by EEC, in support of a proposed development project named Casitas at la Mariposa. The proposed development project is generally located within several land parcels along East Corte Vista la Mariposa, west of North Houghton Road within the limits of the City of Tucson, Arizona. The FLO-2D model covers portions of Sections 35 and 36 of Township 13 South Range 15 East and Sections 1, 2, and 12 of Township 14 South Range 15 East of the Gila and Salt River Meridian.

It is generally understood that the purpose of the FLO-2D model is to define existing 100-year floodplain limits and flow hydraulic conditions associated with the Agua Caliente Wash west of North Houghton Road, and to support an encroachment analysis reflecting the proposed development within the floodplain. The project area is affected by Federal Emergency Management Agency (FEMA) delineated Special Flood Hazard Areas (SFHAs) Zone A and AE, as well as Shaded Zone X and non-shaded Zone X (not SFHAs). Evident by information provided by EEC, recent efforts in support of the proposed development include preparation of a rezoning request filed with the City of Tucson (COT) and Conditional Letter of Map Revision (CLOMR) request filed with FEMA. To date, the status of those applications is unknown.

Review Summary

The FLO-2D input and output files were provided to JE Fuller on October 6, 2022, and the executable (FLOPRO.exe) was provided on October 19, 2022. Also provided to JE Fuller were a draft Technical Data Notebook (TDN), and various spreadsheet, maps and modeling data files. JE Fuller re-ran the existing and proposed models with additional floodplain cross sections using the executable provided, to investigate model performance and facilitate the review.

The following is a summary of our review of the FLO-2D model and associated information provided by EEC:

1. The following table presents the result of review of selected model parameters input to the FLO-2D model:

Table 1. Selected FLO-2D Model Parameters

Parameter	Value	Notes
Grid Size	20 ft.	Reasonable
Manning's n	0.04	Reasonable
SHALLOWN	Not	As specified by Pima County Tech 035
	used	(Variable AMANN=-99)
FROUDL	0.95	Reasonable, as specified by Pima County Tech 035
TOLGLOBAL	0.004	As specified by Pima County Tech 035
DEPTOL	0.0	As specified by Pima County Tech 035

2. The FEMA Flood Insurance Study (FIS) for Pima County (September 28, 2012) provides a Table of Regulatory Discharges as Table 6. An excerpt of that table is shown below.

TABLE 6- SUMMARY OF DISCHARGES

FLOODING SOURCE	ORAINAGE AREA (sq. miles)	10-PERCENT	PEAK DISCH	ARGES (cfs) 1-PERCENT	0.2-PERCENT
AGUA CALIENTE WASH ¹					
Upstream of confluence with Tanque Verde Creek Downstream of the divergence	40.4	- (3\$) - 2\$:	6,040 7,930	7,180 10,540	9,555 18,925
of Agua Caliente Spur Flow Downstream of confluence with Soldier Canyon Creek) alt	埭	9.200	13.000	26,000
Upstream of confluence with Soldier Canyon Creek	28.6	3,400	8,400	12,000	24,000
AGUA CALIENTE SPLIT FLOW	12 ° 4				
At divergence from Agua Caliente Wash	*	*	1,890	3,360	7.080
At confluence with Tanque Verde Creek	*	*	3,160	5,820	16.445
AGUA CALIENTE SPUR FLOW At confluence with Agua Caliente Split Flow	ήε	*	1,270	2,460	7,075

It is recognized that the discharges at the upstream model domain boundaries match the values presented in the FIS Table where the domain boundaries intersect the SFHAs, however the discharge simulated along Agua Caliente Wash west of the project site ("Upstream of confluence with Tanque Verde Creek") does not match the FIS table value (7,180 cfs). As evident by floodplain cross sections entered into the model, the discharge simulated in the FLO-2D model is at most 6,178 cfs or roughly 86% of the peak discharge stipulated by the FIS.

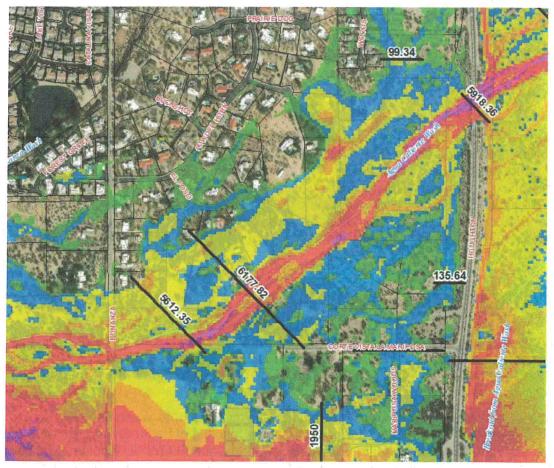

Figure 1
FLO-2D Discharges and Flood Depth Mapping

Suggest narrowing the focus of the model to west of the centerline of Houghton Road, to correctly simulate the FEMA-specified discharge along Agua Caliente Wash, for the purposes of estimating existing floodplain hydraulics and performing the encroachment analysis.

- 3. Suggestions for improving model performance:
 - a. Remove precipitation input from the FLO-2D model, since the purpose is to model the floodplain influences from the regulatory watercourses in the project vicinity.
 - b. Instead of simulating hydrographs flowing along the watercourses, input quasi-steady inflows with a prolonged peak discharge for the duration of the model simulation time.
- 4. The encroachment analysis must also demonstrate compliance with allowable velocity changes, COT Ordinance §26-5.2.6.

- 5. The encroachment analysis appears to indicate adverse impacts, flood depth changes greater than 0.1' offsite. Verify and correct as required.
- 6. The bridge structure along Houghton Road (Project: 4BHTVC) is not modeled in the FLO-2D model.
- 7. The inflow nodes appear to be tightly spaced and too near the edge of the upstream domain boundary, potentially causing backwater effects and inducing overbank flow upstream of the project site. Suggest spreading those apart and away from the edge of the model domain.

The dimensions of FLO-2D grids is 20 ft. x 20 ft., area of each grid is therefore calculated to be 400 square feet. Modify the inflow data to maintain the relationship recommended by FLO-2D:

$$Q_{\text{neak}}/A_{\text{surf}} < 10.0 \text{ cfs/ft}^2$$

8. Unrelated to the FLO-2D model, the development will be subject to limitations imposed by erosion hazard setbacks (COT Ordinance §26-7). Suggest performing a delineation of EHS for future site planning. Based on the spreadsheet provided for hydrograph development, the time of concentration (Tc) for Agua Caliente Wash is determined to be 93 minutes, and according to the FIS Discharge Table, the drainage area for Agua Caliente Wash at the project site is 40.4 square miles. Equation 7 from the SMDDFM may apply as the Aqua Caliente Wash could be considered a "Regional Watercourse" as defined in the SMDDFM.

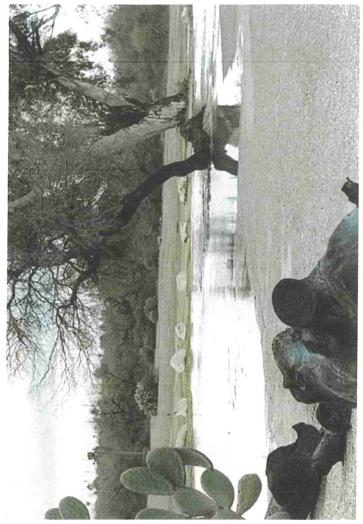

Use of FLO-2D versus FLOW-3D Software

EEC has requested that this Review include discussion of the use of FLO-2D compared to the use of the FLOW-3D software package in simulating the floodplain. FLOW-3D is not widely recognized nor widely used in the practice of modeling floodplains, such as what is required of this project. The ability for the local reviewing agencies (COT, PCRFCD) to accept and/or review model data related to FLOW-3D is unknown.

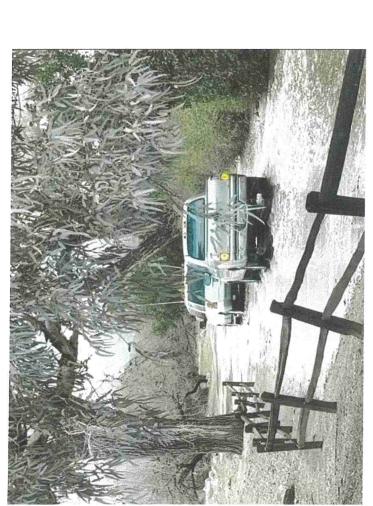

FLO-2D is a suitable model platform for evaluating the Aqua Caliente Wash floodplain in the vicinity of the project, considering the project intent to pursue a Conditional Letter of Map Revision (CLOMR) with FEMA, supported by the modeling. The use of the program FLOW-3D would not be considered appropriate to model the floodplain for the project CLOMR since that program is not included on the FEMA-approved list of Numerical Models Meeting the Minimum Requirement of National Flood Insurance Program, and therefore would not be accepted by FEMA in the application for a CLOMR. The following web link provides the list of Numerical Models Meeting the Minimum Requirement of National Flood Insurance Program:

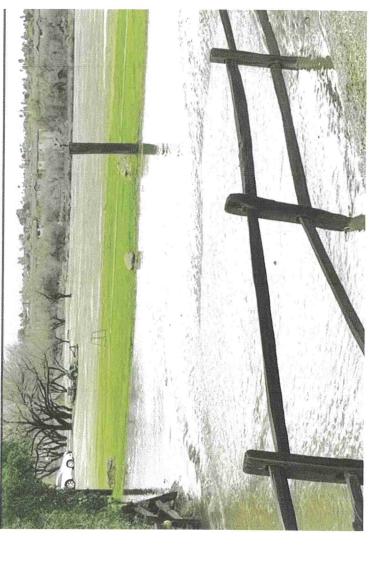

https://www.fema.gov/flood-maps/products-tools/numerical-models/hydraulic

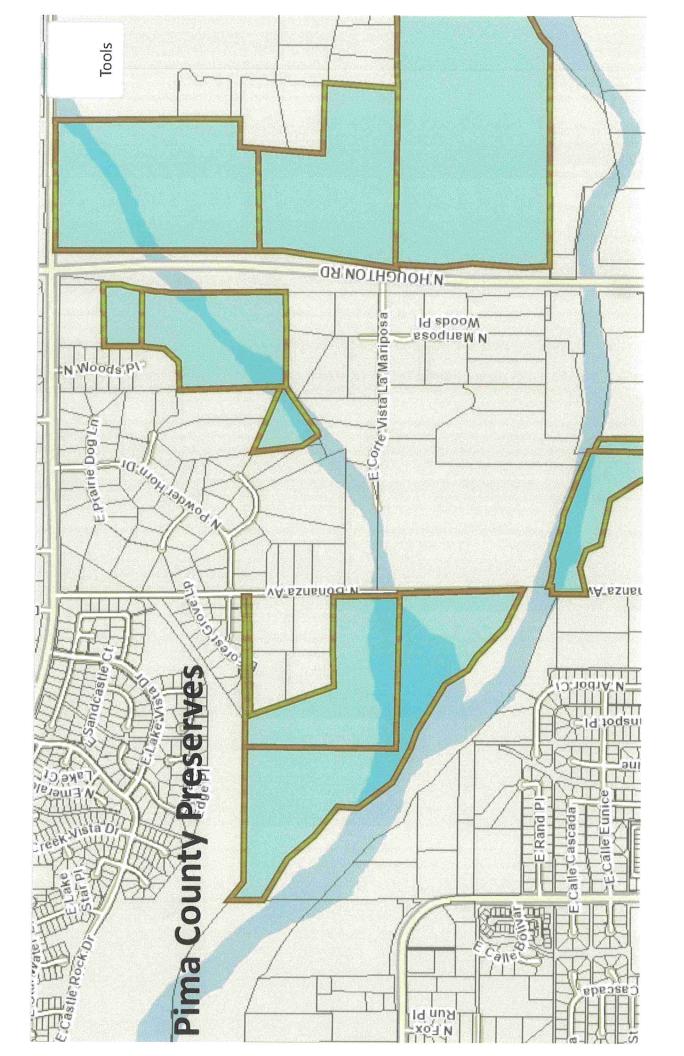

It is recognized that the area where the project is located is highly complex relative to floodplain modeling and mapping. The effective FEMA mapping is based on 1-dimensional (1D) methods, and it would not be expected that a 2-dimensional model will produce results matching those produced by 1D modeling. Since the FLO-2D model covers land outside the project area with the intent to model the flow conditions at/surrounding the site, and given the interest in doing a 3D model, suggest making a smaller HEC-RAS 2D model (which would sample the underlying terrain along the mesh faces) of the project area west of Houghton with the FEMA-specified discharge as upstream inflow.

PROTEST FORM ATTACHMENT

Ref: C9-21-20 Casita Village at La Mariposa For Zoning Examiner's Meeting on January 9, 2025

JOHN R. LOCKWOOD (Address: 9859 E. Forest Grove Loop, Tucson, AZ 85749)

Date: January 6, 2025

REASON:

I am opposed to this rezoning and development for the following reasons:

SUMMARY

The rezoning of a part of the Agua Caliente Floodplain and the proposed development (Casita Village at La Mariposa) will increase the risk of flooding and the likelihood of further associated life safety incidents.

Current flooding issues in the area have not been resolved, which is a conditional requirement for rezoning contained in the Bear Canyon Neighborhood Plan. This development will further increase the likelihood of greater damage from flooding in the surrounding communities.

In January 2022, the Zoning Examiner retracted his first decision to oppose the rezoning decision made a few short weeks prior in December 2021. This was based upon the Developer's appointed civil engineer's amendment to his original floodplain encroachment analysis, provided a Conditional Letter of Map Revision (CLOMR) from FEMA was obtained. This decision and the subsequent CLOMR was based upon, in my professional opinion, a flawed and narrowly focused hydrological study which has not been verified by an independent third-party hydrologist or certified civil engineer. It should be noted that the use of flood risk modeling computer software programs is not an exact science. It is only an estimate to set flood risk insurance premiums which in this case does not align with the surrounding communities' experiences. It should be noted that this application for rezoning this parcel of land has been denied by the Mayor and Council four (4) separate times since 1994.

It is also sensible for the Bonanza Avenue gate to La Mariposa Sports Club to remain closed as it involves crossing both the Agua Caliente and Bonanza Washes, where the life safety rescues have occurred.

Lastly, I emphasize that this proposed rezoning, and development does not meet City Ordinance #11396 covering floodplain encroachment requirements or align with Plan Tucson 2013 edition.

1. PLANS, ORDINANCES, STANDARDS AND POLICIES

BEAR CANYON NEIGHBORHOOD PLAN (BCNP)

The Plan was adopted on 9th October 1984 by the Mayor and Council after the area was annexed to the City by Pima County.

The "Planning Center" has stated in their documentation to the Zoning Examiner that the proposed rezoning development aligns with the goals and policies of the BCNP. This statement is misleading for the following reasons:

a) Under Policy

- Quote: "Preserve the integrity of established neighborhoods."
 The proposed development will be identical to the one recently constructed at 9125 Catalina Highway. This proposed development does not therefore align with the BCNP.
- b) Appendix A: Bear Canyon General Development Plan
 - Quote: "From asterisk" "Land uses proposed are contingent upon a satisfactory solution to the existing flood problems."
- c) Under Environment
 - Quote: "At the time flooding issues are resolved, a mix of medium density residential and office uses might be appropriate in this area.
 - This proposed development does not align with the BCN plan. The flooding in the area is getting worse as shown in the community photographs. In addition, the owner of La Mariposa Sports Club has built up the east bank of the Aqua Caliente wash due to frequent flooding of the sports area.

CITY ORDINANCE #11396 SEC. 26

- a) SECTION 26-5.2 "Floodway Fringe (Floodway) Development
 - Quote: "Not increase the base flood elevation more than 1/10th of a foot, as measured from the property boundary."
 The CLOMR and notification letters to individual landowners within 400ft of the proposed rezoning area show that BFE's may increase or decrease in different areas around their properties.

- Quote: "Not result in higher floodwater velocities which significantly increase the potential for flood or erosion damage."
 Exhibit 4 Map provided by the Developer's civil engineer shows increases in flood velocities that vary throughout the area up to 1.32fps.
- The proposed development will require an all-weather road access.
 This means the existing or a new road will have to be built up and this may cause a levee and change the BFE's and velocities in the area which has not been modeled in their software.

PLAN TUCSON (Version 2013)

The proposed development does not align with the goals and policies in the following areas:

(a) PS 3 ("Public Safety")

The developer/owner is threatening to reopen the Bonanza Avenue gate to La Mariposa Sports Club if this rezoning is not approved. The gate has been closed for 2 years, except for emergencies. It would be very unwise to reopen the gate for normal traffic access to the club as Bonanza Avenue crosses two washes (Agua Caliente and Bonanza). Recent near drowning rescues by Tucson Fire Department prove the back entry gate would increase the life safety issues already present during flooding.

(b) G.12 ("Rehabilitate and Enhance Natural Drainage Systems, Water Detention and Retention Basins and other Infiltration Areas for Multiple Benefits, such as Recreation, Wildlife Habitat and Stormwater Management.")

The large retention basins, trails and vegetation within the adjacent Isabella Lee Nature Preserve under the jurisdiction of Pima County were badly damaged in recent major flooding events in 2021, 2022 and 2023. This damage was caused by the Agua Caliente overflowing with floodwater which has been causing widening of the wash and additional adjacent channeling. Photos are available. Pima County has not been maintaining or periodically inspecting this important recreational facility.

(c) LT 9 (Locate Housing, Employment, Retail and Services in Proximity to each other to Allow Easy Access between Uses and Reduce Dependence on the Car.")

Except for proximity to the La Mariposa Sports Club, the proposed development is miles away from other facilities. The nearest bus stop is at the junction of Broadway with Houghton Road. The nearest shops are located at the junction of Catalina Highway and Tanque Verde Road. These luxury rental casitas are designed for car owners, who receive above average salaries or other income, or those who wish to spend the winters in Tucson, Arizona. They are not affordable housing as the rents are expected to range from \$1500-\$2500/monthly.

(d) LT 27 ("Use Existing Neighborhood, Area and Other Special Plans as a Starting Point, undertake an Inclusive Public Process to Explore the Concept of Developing and Implementing Planning and Service Areas to Coordinate and Enhance Land Use Planning, Infrastructure Improvements and Public Service Delivery.")

The BCNA Area General Plan has stood the test of time but is not being adopted with this proposed rezoning development. The community is not involved at the conceptual stages of these developments and there has been a deep lack of transparency by the City of Tucson and the Planning Center.

The already heavy traffic congestion on Houghton Road between Broadway Blvd. and Tanque Verde Road, where a widening project has been proposed for the past 30 years, has not been addressed. The proposed Casita Village and La Mariposa will only further denigrate the traffic congestion and add additional traffic safety issues.

2. HYDROLOGY, RISK AND FLOOD INSURANCE. Hydrological Study for the CLOMR

(a) The Bonanza / Castle Wash was not considered in the Developer's Floodplain Encroachment Analysis which isn't sensible. Increased floodwaters have been overflowing from the Agua Caliente Wash moving North on Bonanza Avenue towards the Forest Grove Loop neighborhood. In addition, the floodwaters from the Agua Caliente Wash crossing Bonanza Avenue have been entering the Isabella Lee Nature Preserve and onwards to the Lakes at Castle Rock neighborhood over the past 5+ years. In 2010, Pima County Regional Flood Control District commissioned a hydrological study (#FP-059-2010) of the Castle Wash watershed North of Bonanza Avenue, but the study did not cover Tanque Verde Road or the area going south towards Agua Caliente Wash and floodplain. The floodwaters cross Tanque Verde Road

into the City's jurisdiction through an under-road culvert and into a retention basin where it crosses Bonanza Avenue into the Bonanza Wash and then finally into the Agua Caliente floodplain. This Report shows a peak discharge of 2,559cfs, but even though it has caused major flooding damage to adjacent property and life safety rescues, it was not considered in the Developer's civil engineer's floodplain encroachment analysis which did not include Bonanza Avenue, Forest Grove or Lakes at Castle Rock.

- (b) The Aqua Caliente Wash regulatory discharge was increased from 3200cfs in 1999 to 7180cfs in 2010 by the PCRFC District. This reflects the increase in flood depths and floodway widths attributable to more hazardous conditions. This again indicates the criticality and unpredictability of the changing conditions that impact the input data to flood risk software computer programs such as the peak flood water discharge rate.
- (c) The Developer's floodplain encroachment analysis report does not mention the impact of climate change, increased sedimentation (no sedimentation transport analysis was completed) flows due to the Big Horn wildfire in the Santa Catalina Mountains, actual size of the proposed retention basins or how these basins will be inspected and maintained as they will be located on private property. The peak discharge rates are those taken from FEMA's Flood Insurance Study in 2012. We don't know what impact further development, other projects or obstructions upstream since 2012 have been constructed that has impacted the flood risk.
- (d) There was no <u>verification</u> of the Developer's floodplain encroachment analysis report by an independent third party certified civil engineer. A civil engineer was consulted to undertake a review only and there is no confirmation that his recommendations were implemented.
- (e) As a resident of Forest Grove Loop for 25 years, my wife and I can personally attest to experiencing more frequent 1/100-year floods in the area around Bonanza Avenue and the Agua Caliente Wash and floodplain particularly over the past 5+ years.
- (f) There was no calibration of the flood software program output against recent Local Historical events either through flood gauges in the Agua Caliente watershed areas or from evidence taken through photographs or videos.

Risk and FEMA Flood Insurance

The FEMA CLOMR used the Developer's floodplain encroachment analysis to determine potential changes to the risk insurance rates from the last issued FEMA Final Insurance Risk Map dated September 28, 2012.

My wife and I reside in Forest Grove Loop where approx. 50% of the properties have setbacks from the Bonanza Wash to cater for the Bonanza 1/100-year floods. Our property is located outside the Special Flood Hazard Area, but we have seen our FEMA insurance premiums increase 46% over the past 4 years. The City encourages the purchase of FEMA flood insurance as they have given seminars informing the public that 1-inch of flood water inside a property will result in at least \$26,000 of damage. FEMA flood insurance coverage is limited to US\$250,000 for the structure and \$100,000 for the property's contents. In my opinion, the insurance would not cover catastrophic damage to properties in the neighborhood from a major flooding incident.

It should be noted that a 1/100-year flood can occur at any time and statistically has a 26% chance occurring over a period of 30 years, which is the normal term for a mortgage. In addition, FEMA statistically used a figure of \$7.3million in 2020 for the value of a human life. This value is used in their cost/benefit analysis to determine whether a project is economically justifiable. In the case of Agua Caliente Wash and Bonanza Avenue and the proposed rezoning Development, the City's financial gain of \$2million from construction sales tax and development fees does not compare with the potential increase in fatalities, permanent loss of a significant part of a critical riparian area and damages to surrounding community property.

NOTE: BCNA has available documentation, records, meeting notes, photographs and videos to substantiate the above information.

September 17, 2024

Alfred Zuniga, P.E., Engineering Division Administrator
City of Tucson Department of Transportation and Mobility
201 N. Stone Avenue, 4th Floor
Tucson, AZ 85701

Subject: Casitas at La Mariposa Conditional Letter of Map Revision

Mr. Zuniga:

The Pima County Regional Flood Control District (District) has received your email request to review the hydraulic modeling associated with the Conditional Letter of Map Revision (Case No. 23-09-0749R) approved by the Federal Emergency Management Agency (FEMA) on May 16, 2024. The District has reviewed the information provided by the developer's consultant, Civil and Environmental Consultants, regarding the Casitas at La Mariposa development and offers the following comments:

- 1. The development appropriately avoids any encroachment into the FEMA designated floodway associated with Agua Caliente Wash. Floodways are areas designated by FEMA as necessary to maintain the carrying capacity of the base flood (100-year flood).
- 2. The development does encroach into the Zone AE Special Flood Hazard Area (SFHA) associated with the Agua Caliente Wash. When encroachment into the regulatory floodplain occurs, the relevant development standard required by both the City of Tucson and Pima County is to limit any adverse impact to adjacent properties to no more than 0.1-foot rise in water surface elevation of the 100-year flood, and not result in higher floodwater velocities which significantly increase the potential for flood or erosion damage. The District confirms that the model provided to FEMA to support the CLOMR demonstrates that this standard has been met.
- 3. The development also encroaches into the Zone A SFHA associated with Houghton Road. When the District was working with FEMA on the Physical Map Revision to update the entire Agua Caliente Wash floodplain in 2012, FEMA observed that Houghton Road behaves like a levee to divert floodwaters but does not meet the Code of Federal Regulation requirements to be certified as a levee. As such, Houghton Road was designated as a levee-like structure that could be prone to failure. The Zone A SFHA was created by FEMA assuming Houghton Road did not divert floodwaters.

The recent FEMA-approved CLOMR seems to overlook this previous FEMA designation and creates a Zone AE SFHA based on flows that pass under Houghton Road. In essence, FEMA is no longer treating Houghton Road as a levee-like structure, but instead as a true diversion.

Alfred Zuniga, P.E., Engineering Division Administrator
Casitas at La Mariposa Conditional Letter of Map Revision
September 17, 2024
Page 2

The District does not object to FEMA's change in position but would like to clarify the reason for the change. FEMA's designation change does not alter the risk to adjacent properties that the neighbors are concerned about, but the designation change may impact the amount of fill needed to remove the property from the Zone A SFHA. As a result of this discrepancy, there is risk that after grading is complete and a LOMR is applied for, FEMA may return to its earlier stance of treating Houghton Road as a non-levee structure. As such, it is recommended that a "no berm" condition hydraulic model, both pre- and post-construction, be performed to ensure the development is removed from the Zone A SFHA. This recommendation could become a condition of rezoning with a requirement to complete prior to the issuance of a grading permit.

Please let me know if you have any questions regarding this letter or if you would like to schedule a meeting.

Sincerely,

Eric Shepp, P.E. Director and Chief Engineer

ES/tj

c: Brian Jones, Deputy Director – Regional Flood Control District

- (8) Not decrease groundwater recharge.
- (9) Not contain a waste disposal system wholly or partially.
- (10) Not result in the placement of any structure or material that may divert, retard or obstruct the flow of floodwaters.
 - (11) Not result in creating a danger or hazard to life or property.
- (12) Not utilize structures except hydraulic structures and those structures exempted under section 26-4(4)--(8), which are designed and constructed to protect life or property from dangers or hazards of floodwaters.
 - (13) Not contribute to debris accumulation upstream and/or downstream.
- (14) Not create a water pollution problem in the floodway due to soluble, insoluble, or solid materials, at the time of flooding.

(Ord. No. 7407, § 5, 6-25-90)

2,3,4, 601/8)

Sec. 26-5.2. Floodway fringe development.

No development, storage of materials or equipment, or other uses shall be permitted which, acting alone or in combination with existing or future uses, create a danger or hazard to life or property. Development in the floodway fringe shall:

- (1) Conform to adopted city land use plans for the design of public and private development in the floodplain.
- Not result in damage to public facilities as a result of erosion or flooding events.
- Not generate adverse impacts, including but not limited to erosion, upstream or downstream.
- (4) Not unnecessarily alter riparian habitats of watercourse and adjacent bank areas.
- Not increase the base flood elevation more than one-tenth of a foot.
- (6) Not result in higher floodwater velocities which significantly increase the potential for flood or erosion damage.
 - (7) Not significantly increase channel or bank erosion.
- (8) Use, where appropriate, native and/or adaptive landscaping to enhance the open space character of the floodway fringe.
- (9) Place the first (including basement) floor one (1) foot above the base flood elevation. Following the pouring of the first slab or finish floor installation and prior to any framing, the applicant shall submit to the city engineer certification by state-registered land surveyor or a state-registered professional civil engineer that the elevation of the lowest floor is in compliance with that approved by the city engineer's office.
 - (10) Anchor all structures, material or equipment firmly to prevent their flotation.
- (11) Place all service facilities such as electrical and heating equipment at or above the regulatory flood elevation.

ROJAS FAMILY 10024 E EL POSO TRL TUCSON, AZ 85749

Re: Notification of Flood Hazard Revisions

The Flood Insurance Rate Map (FIRM) for a community depicts the floodplain, also referred to as a Special Flood Hazard Area (SFHA), is the area which has been determined to be subject to a 1% (100-year) or greater chance of flooding in any given year. The floodway is the portion of the floodplain that includes the channel of a river or other water course and the adjacent land area that must be reserved in order to discharge the 1% annual chance (base) flood without cumulatively increasing the water-surface elevation by more than a designated height. The FIRM is used to determine flood insurance rates and to help the community with floodplain management.

Saunders Amos LLC is applying for a Conditional Letter of Map Revision (CLOMR) from the Federal Emergency Management Agency (DHS-FEMA) to revise FIRM 04019C2307M Effective September 24, 2012 for the City of Tucson, Arizona, along the Agua Caliente Wash. A residential subdivision with 179 new units is being proposed at the northwest corner of Corte Vista la Mariposa and Houghton Road, which the applicant has demonstrated will not adversely impact the water surface elevation at your property, any increases to Base Flood Elevations is a result of changes in existing topography and/or utilization of more accurate survey for the project.

Once the Project has been completed, a Letter of Map Revision (LOMR) request will be submitted that will, in part, revise the following flood hazards along the Agua Caliente Wash.

- Base Flood Elevations (BFEs) may increase along the Agua Caliente Wash due to changes in existing topography and/or utilization of more accurate survey.
- 2. The SFHA will change along the Agua Caliente Wash, removing the project site from the 1% chance flood.

The City of Tucson Floodplain Administrator, in accordance with National Flood Insurance Program regulation 65.7(b)(1), hereby gives notice of the City of Tucson's intent to revise the flood hazard information of a SFHA that extends to your property at 10024 E EL POSO TRL.

Maps and detailed analysis of the proposed flood hazard revisions can be reviewed at The City of Tucson Floodplain Administration at 201 N Stone Ave 4th floor, Tucson, AZ 85701. If you have any questions or concerns about the proposed project or its effect on your property, you may contact the City of Tucson Floodplain Administrator at (520) 791-4371 from 8 am to 5 pm, Monday thru Friday.

Sincerely,

Jacob Lomeli, P.E. CFM Engineering and Environmental Consultants Inc. Project Manager (Applicant Representative)

Blake Richards, P.E. City of Tucson Interim City Engineer/Floodplain Administrator (Community Official)

ZONING EXAMINER

REPORT TO MAYOR AND COUNCIL

October 21, 2005

C9-97-24 Wooton - Houghton Road

Rezoning: SR (Single Family Residential at One House/3.3 Acres) to R-1 (Single Family Residential up to Six Houses/Acre)

Page 1 of 5

BACKGROUND

This rezoning request from SR to R-1 zoning is to allow the development of 21 one and two-story single family residences on a 10.9-acre site on the west side of Houghton Road south of the Agua Caliente Wash.

Land use policy direction for this rezoning site is provided within the Bear Canyon Neighborhood Plan and the General Plan.

PUBLIC HEARING SUMMARY: October 6, 2005 (Minutes Attached)

Craig Gross, Development Services Department, presented the staff report with a recommendation for denial. Mr. Gross also commented that one written approval and two written protests were received.

Charlie Deans and Tom Parsons, the applicant's agents, presented the rezoning request. Jim Wooton, the owner, also spoke in support of the rezoning request.

All six persons who testified during the public hearing expressed opposition to the requested rezoning. Included in the opposition were representatives from the Pima County Regional Flood Control District, the Powder Horn Ranch Homeowners Association, the Bear Canyon Neighborhood Association, and the Tanque Verde Valley Association. Additionally, C. H. Huckelberry, Pima County Administrator, submitted a letter of opposition to the requested rezoning.

With no one else wishing to be heard, the public hearing was closed.

MR. PARSONS

Those homes have been there for about 50 years at a stretch of the watercourse that has 13,000 cfs. Before it arrives to this project, 8,000 of that is split off and sentenced down. Downstream from us, like Pantano, is a watercourse that has about 38,000 cfs, so we have 38,000 below and 13,000 above. We are at 5,000, maybe 6,000 cfs and we are completely outside of that floodplain. In terms of a relative risk and ground-truthing in the sense that we have existing homes both upstream and downstream that have been permitted without any harm at all, I would ask that you give less precedence to the concerns that I read in one of the protests.

With that I ask that you honor the synergy of complimentary uses that were conceived of originally for this area. We are on a drip in a sense that the club cannot succeed if part of that synergy isn't honored as a stand-alone use. Thank you, any questions?

MR. GAVIN

Not at this time Mr. Parsons, thank you. Is there anyone wishing to speak in favor of the proposal at this time? Is there anyone wishing to speak in opposition to the proposal at this time? Yes, Ms. Shields?

SUZANNE SHIELDS

Good evening, and I promise to keep this brief, otherwise I'll be locked into the County garage. Just briefly, my name is Suzanne Shields, I am the director of the Regional Flood Control District and I am here to speak to the rezoning and to clarify some issues that I saw presented. (INAUDIBLE – NEW TAPE) what is called the corrective/effective floodplain, which is still a conditional corrective/effective. FEMA has not gone through the formal process where they would have to make a public hearing process. The same is true for what is called the CLOMR. Again, it is a conditional letter of map revision and has not yet been approved by FEMA. I certainly appreciate Dr. Wooton and his consultants concerns that it has taken so long for us to get the floodplain maps revised. This is a very complicated wash upstream. They have had us look at several conditions. If all the water goes through the Agua Caliente Bridge and Tanque Verde, or if only a portion goes through the bridge at Agua Caliente and if Tanque Verde Road is (INAUDIBLE) what are the flow conditions? Downstream of Houghton Road, because there was a mapping that was done after the construction of the two Houghton Road bridges, they did just have us correct inaccurate topography.

Generally though, as I'm saying, I caution you that the floodplains have not been formally adopted. They will be more or less in the fashion that is shown. That is not to say that there could not be flooding going across the site because in fact, if you look at the grade of the Agua Caliente, which is a very shallow wash, it's about .6 percent going in the channel. The flow, once you're in the over-bank going directly south to the Tanque Verde Wash, is about .5 percent, so there is very little slope difference if it becomes out of the wash.

MS. SHIELDS

Our concerns, and I can only speak for what we would do if it's inside the County, we would probably create a shaded zone access for the shallow flooding during the 100-year flood and still make some requirements about raised elevations or the finished floor elevations just because it is in an area that is between components.

Regarding one issue that Mr. Parsons brought up, when I believe that Mr. Huckelberry was speaking about the important riparian area, he was speaking about what is under our conservation land system and I recognize that is not within the City of Tucson. Our conservation land system looks at all the resources, whether those are important riparian areas or whether those are the uplands adjacent to important riparian areas, as well as the cultural resources. I am pleased to hear that they have made extensive surveys. Having constructed Houghton Road Bridge, we're more than aware of the fact that this is even a pre-Hohokam site. The Houghton Road site is a very important site, it even contains human remains. Our concerns and voicing the cultural resources was just our knowledge of the site and how important the Houghton Road site is.

As far as the dedication of the open space along the wash, speaking as a representative of the Flood Control District and as a property owner, we recently acquired the property that was to the north, a portion of the Woods, the Doucette's property, 21 acres, the major portion that was in the floodplain and floodway. We did that under the 2004 Bond program. Tucson as a community requested 5 million for open space in the Houghton Road/Tanque Verde/Agua Caliente area to the east, which is known as the Isabelli, which is also very important riparian area.

We would like to make sure that we have continuous linkages of those sites, both because they fit into keeping the natural floodplains open, but as well as it fits with both the City and the County's Trail System.

Thank you. Like I said, I just wish to call the attention to the fact that it is still an area that has flooding and has a high water table. As much as we would like to believe that only so much water goes through each one of the bridges, God doesn't have flood control costs that says 2,000 goes this way and 8,000 goes this way. It is somewhat unthinkable. There should be during the development some consideration of the potential for break-over flow. Thank you.

MR. GAVIN

Thank you Ms. Shields, if you could just stay there for a moment. You mentioned a lot of things and I don't know if I can absorb those many things and fully understand, so I think I have some questions for you. Basically I think what you're telling me is that the CLOMR is a conditional and it is not final. Is that what you're saying?

MS. SHIELDS

Yes. There is a process to go through with FEMA where you present your technical information. They look at it and review it. They have looked at that technical information. Prior to approval of those things, they are going to require that we do some upstream improvements. The final letter of those revisions will not be issued until they do the actual construction. What they are asking us to do is not on the Houghton Road Bridge, but on the Tanque Verde Road Bridge. One of the possible solutions is that even though the water does not get there, they want us to expand that bridge if all 13,000 cfs goes that way. We either have to do that or look upstream and perhaps re-map as a floodway area as a break-over coming down to the Bel-Air Estates.

MR. GAVIN

So if I understand you correctly, the bottom line here is I think you mentioned that this rezoning site could be susceptible to flooding. Is that what you're saying?

MS. SHIELDS

Yes. We had to model what was coming, make some assumptions, make some assumptions about the expansion downstream of the bridge. It is somewhat, it's a technical evaluation of what could happen, but in nature there is no certainty as to what exactly might happen.

MR. GAVIN

And also, you mentioned about the culture of resources, archeological resources, and the open space and the riparian area. You mentioned that the County, is it correct, purchased 21 acres to the north of the Agua Caliente Wash? Did I understand that correctly?

MS. SHIELDS

Yes, I can point that out to you on the map.

MR. GAVIN

Please, if you would.

MS. SHIELDS

In negotiation with Tom Doucette and his company, they retained I believe four or five units to come off of the Woods from approximately this line here, and this shape, it's approximately 21 acres. That is what we recently purchased. The other property that we own is what is knows as Isabelli, it's the property to the far west.

MR. GAVIN

Ms. Shields, let me ask you, what was the purpose of purchasing those 21 acres?

MS. SHIELDS

Twofold, one, this is where the major floodway and floodplain comes in. In fact, almost the entire parcel was within the 100-year floodplain of the Agua Caliente, and certainly being immediately downstream, this was the floodway of the Agua Caliente. Also, it was purchased for its resource value, both for riparian habitat and a portion of the archeological site extends into this corner of the property.

MR. GAVIN

Since we are talking about purchases, is there any interest in purchasing this property? Let me ask you because I cannot have these discussions, have you had any discussions with the property owner on this?

MS. SHIELDS

From a land acquisition program, we approached the property owner about buying the wash channel specifically the center of the channel. We did want to make sure that there was a connection. There was a large difference in value. What we value a channel is about \$6,000 an acre, I believe they're over \$100,000 an acre, so we were not anywhere near the agreement.

MR. GAVIN

Okay, so is it right for me or correct for me to assume that it's a matter of money? I mean, is there a likelihood that could happen say if you agree with the property owner that basically it could happen at the right price in your opinion?

MS. SHIELDS

At the right price of course it could happen. Both our Floodplain Acquisition program and the County Open Space Bond program are a voluntary program. Some people choose to participate for one reason or another, some do not. We go both for outright purchase, as well as for conservation easements.

MR. GAVIN

Thank you Ms. Shields for your presentation and your answer to my questions. Anyone else wishing to speak at this time? Yes sir?

FRED MAIER

My name is Fred Maier, I live at 9981 East Buckshot Circle, zip code 85749. I'm also the president of the Powder Horn Ranch Homeowners Association and tonight I'm speaking on behalf of the board and myself. The position that Powder Horn Ranch is basing their factors, the following factors on, the first thing we were concerned about is that in an R-1 zoning with the current plat showing 21 units, this could easily be expanded to 56 units without any neighborhood interaction as long as it is in compliance with the *Land Use Code* requirements.

MR. MAIER

Even though this property is just outside the 100-year floodplain for the newly created corrective/effective model of the floodplain...

MR. GAVIN

Mr. Maier, let me stop you so I am on the same page with you. Where is that, is that in the report?

MR. MAIER

It's the attachment to the mailing that was sent to the residents.

MR. GAVIN

Okay. If you can help me out here, where in that report so I can read along with you and I can mark that because I want to take your comments and also mark what you are talking about in here. Is it under riparian vegetation habitat, is that correct?

MR. MAIER

I believe it's under Design Consideration, page 3 of 5. I mean, I'm not going to go any further with that, I mean, it's all here.

MR. GAVIN

Okay.

MR. MAIER

Okay. I'm talking about the CLOMR, which is a conditional, that is the key word, letter. It suggests the significant increase in the flow of water through the Houghton Road Bridge from the previous effective model. This increase was 60 percent, so we have gone from one model to another model, raised the flow of water 60 percent, and that is 3,200 cubic feet per second going to 5,042 cubic feet per second. To further complicate, and you have heard Suzanne who probably knows obviously a lot more about it, to further complicate the situation, there is a bunch of upstream improvements that FEMA has asked the County to make. Now, they are not funded at the moment. Maybe that will happen a couple of years from now, five years, ten years, maybe it will never happen, we don't know. This proposed model, which presumes these improvements are made, would further increase the flow of waters through the Houghton Road Bridge now. That would be 7,350 cubic feet per second, which is 130 percent increase over the effective model, which we have today.

What this brings us to is do we want to approve a rezoning request that could put up to 56 more families in harms way with the next 100-year flood as these water will go somewhere through this area? As you heard Suzanne say, it's a very shallow area there.

Public Hearing – October 6, 2005 C9-97-24 Wooton – Houghton Road Page 21

MR. MAIER

Do we trust computer models to be anymore accurate than the now disapproved former models? Is the City willing to pay damages to those who might suffer from floodplain conditions different than those predicted in the current models if residences are located close to the newly predicted floodplain?

In conclusion, for the homeowners association and myself personally, we take the position that the R-1 zoning should not be granted. In addition, there is a proposal I think from Development Services. The rezoning request was for RX-1 based on the current plan, which also mitigates the concern for having an increase in number of lots from the current plan. You can't go to 56 units with an RX-1 zoning. That's my understanding. There would be less exposure of the damage obviously since you have, since you're keeping that down to the current proposal.

MR. GAVIN

Excuse me Mr. Maier, what I see in Mr. Gross's staff report, they're talking about RX-2. Is that what you are talking about also? You mentioned RX-1.

MR. MAIER

I'm sorry, yes. I mentioned, I said RX-1.

MR. GAVIN

Because I am seeing RX-2, that is written in the staff report on page 5 of 5.

MR. MAIER

You are absolutely right. I don't know whether I mixed numbers now or not. Considering the RX-2, which does limit because it requires a larger lot size than an R-1, we still don't feel that would be a really acceptable position since work on the Agua Caliente upstream of the Houghton Road Bridge has not been completed and the models have not been validated. We can't be absolutely sure where the water would go that Mother Nature is going to bring us someday. The correct course of action that makes the most sense is not to grant a rezoning at this time and to protect the riparian area and minimize anymore families being placed in harms way on the 100-year flood. If the model is not 100 percent accurate in its assumption and definitions, do we want to have people placed in harms way and beyond even with the zoning of SR? The current zoning as I understand it is SR, and developed as SR would be our position.

MR. GAVIN

Thank you Mr. Maier. Anyone else wishing to speak at this time? Yes ma'am?

JANE ROJAS

My name is Jane Rojas. The address is 10024 East El Poso Trail, as in Powder Horn.

Public Hearing – October 6, 2005 C9-97-24 Wooton – Houghton Road Page 26

MR. DEANS

From the standpoint of staff approaching us and saying "we think now that the study has been completed and we're comfortable with having this rezoning go forward with the study that has been done and that the City and the County have accepted." Essentially that is why we are here before you this evening. This wasn't something that we necessarily initiated and brought back. We're confident of these lines. We're staying out of the floodplain lines with this rezoning and we were encroaching on the previous ones. We think we're doing an environmentally responsive, we're out of the ERZ area. Having encroached into the floodplain as many of the neighbors have across the wash who have experienced problems, we think it is appropriate that this rezoning can go forward. Thank you.

MR. GAVIN

Thank you Mr. Deans. Did Mr. Parsons wish to say anything?

MR. DEANS

Dr. Wooton is here this evening with his wife and I had intended to introduce them at the beginning, but we would like Dr. Wooton just to have a moment.

MR. GAVIN

Sure, please. Dr. Wooton, why don't you come on up. As Dr. Wooton is coming up and he is signing in, Mr. Flick, Mr. Deans mentioned your name just a few moments ago. Let me get your opinion on this. Ms. Shields from Pima County, Director of Pima County Flood Control Department, basically what she said was that she is concerned about shallow flooding on the site as I understood what she said. What is your opinion on this?

MR. FLICK (CMY ENGINEER)

Regarding Suzanne Shields remarks, yes, it is a complicated wash. This is a wash that has no greatly defined channel that it follows every time it floods. It moves depending on how it moves the sediment. The studies that have been done that are shown here as far as the floodplain lines assume a rigid bed as if the sand never moves. That is part of what this is, what the study is for. As one of the residents remarked, it's about flood insurance. It's a risk that the Federal Government is trying to map. They are not trying to map exactly where the water goes, they are trying to map a risk zone and they are trying as best as they can to map with a rigid bed assuming it never moves. It's very possible that during a given flood the wash as we see it there on the map could move up or down or just about anyplace depending on where the river finds the more errotible soils.

MR. GAVIN

Okay, let me just ask. As a City engineer, I'm asking your opinion. Do you agree with Ms. Shields, what she mentioned about the flooding?

Suburban Residential - up to 1 DU/Acre Low Density Res. - 1-6 DU/Acre MED. Medium Density Res. - 6-16 DU/Acre

RESIDENTIAL DENSITIES IN THESE AREAS MAY BE INCREASED TO 20 UNITS PER ACRE IF AN AGREEMENT REGARDING THE PROPOSED DEVELOPMENT IS REACHED WITH A MAJORITY OF THE RESIDENTIAL PROPERTY OWNERS WITHIN 150' OF THE AREA THAT IS SOUGHT TO BE DEVELOPED IS IN EXCESS OF 18 UNITS PER ACRE. THE OWNERS WITHIN 150' AND THE DEVELOPER ARE ENCOURAGED TO REACH AN AGREEMENT RELATING TO THE DESIGN OF THE PROPOSED DEVELOPMENT. IF AN AGREEMENT CANNOT BE REACHED, THEN DEVELOPER HAS TO 2D UNITS PER ACRE.

ALL PROPERTY OWNERS LYING WITHIN 150' OF SAID PROPERTY SHALL BE NOTIFIED OF THE TIME AND PLACE WHEREIN THIS REQUEST BY THE DEVELOPER WILL BE HEARD BY THE MAYOR & COUNCIL.

*** SUBJECT TO 50' BUILDING SETBACK FROM COLONIA TIERRA VERDE SUBDIVISION.

SEE RESIDENTIAL IMPLEMENTATION TECHNIQUE NO. 4 FOR BUFFER POLICY.

AMENDMENT APPROVED BY MAYOR AND COUNCIL ON JULY 6, 1987 BY RESOLUTION #14090 ALLOWING AN EDUCATIONAL INSTITUTION/PRIVATE SCHOOL USE.

AMENDMENT APPROVED BY MAYOR AND COUNCIL ON JULY 6.1987 BY RESOLUTION #14089 TO ALLOW RESTAURANT/DELI USE AND LIMITED RETAIL USES. CONTACT THE CITY OF TUCSON PLANNING DEPARTMENT FOR THE LIST OF ALLOWED USES.

AMENDMENT APPROVED BY MAYOR AND COUNCIL ON MARCH 23, 1998 BY RESOLUTION #17983 TO ALLOW ONE-STORY MEDIUM DENSITY RESIDENTIAL USES.

Appendix A

- Quote: "Not result in higher floodwater velocities which significantly increase the potential for flood or erosion damage." Exhibit 4 Map provided by the Developer's civil engineer shows increases in flood velocities that vary throughout the area up to 1.32fps.
- The proposed development will require an all-weather road access.
 This means the existing or a new road will have to be built up and this may cause a levee and change the BFE's and velocities in the area which has not been modeled in their software.

PLAN TUCSON (Version 2013)

The proposed development does not align with the goals and policies in the following areas:

(a) PS 3 ("Public Safety")

The developer/owner is threatening to reopen the Bonanza Avenue gate to La Mariposa Sports Club if this rezoning is not approved. The gate has been closed for 2 years, except for emergencies. It would be very unwise to reopen the gate for normal traffic access to the club as Bonanza Avenue crosses two washes (Agua Caliente and Bonanza). Recent near drowning rescues by Tucson Fire Department prove the back entry gate would increase the life safety issues already present during flooding.

(b) G.12 ("Rehabilitate and Enhance Natural Drainage Systems, Water Detention and Retention Basins and other Infiltration Areas for Multiple Benefits, such as Recreation, Wildlife Habitat and Stormwater Management.")

The large retention basins, trails and vegetation within the adjacent Isabella Lee Nature Preserve under the jurisdiction of Pima County were badly damaged in recent major flooding events in 2021, 2022 and 2023. This damage was caused by the Agua Caliente overflowing with floodwater which has been causing widening of the wash and additional adjacent channeling. Photos are available. Pima County has not been maintaining or periodically inspecting this important recreational facility.

(c) LT 9 (Locate Housing, Employment, Retail and Services in Proximity to each other to Allow Easy Access between Uses and Reduce Dependence on the Car.")

	e .
	<i>b</i>

Except for proximity to the La Mariposa Sports Club, the proposed development is miles away from other facilities. The nearest bus stop is at the junction of Broadway with Houghton Road. The nearest shops are located at the junction of Catalina Highway and Tanque Verde Road. These luxury rental casitas are designed for car owners, who receive above average salaries or other income, or those who wish to spend the winters in Tucson, Arizona. They are not affordable housing as the rents are expected to range from \$1500-\$2500/monthly.

(d) LT 27 ("Use Existing Neighborhood, Area and Other Special Plans as a Starting Point, undertake an Inclusive Public Process to Explore the Concept of Developing and Implementing Planning and Service Areas to Coordinate and Enhance Land Use Planning, Infrastructure Improvements and Public Service Delivery.")

The BCNA Area General Plan has stood the test of time but is not being adopted with this proposed rezoning development. The community is not involved at the conceptual stages of these developments and there has been a deep lack of transparency by the City of Tucson and the Planning Center.

The already heavy traffic congestion on Houghton Road between Broadway Blvd. and Tanque Verde Road, where a widening project has been proposed for the past 30 years, has not been addressed. The proposed Casita Village and La Mariposa will only further denigrate the traffic congestion and add additional traffic safety issues.

2. HYDROLOGY, RISK AND FLOOD INSURANCE. Hydrological Study for the CLOMR

(a) The Bonanza / Castle Wash was not considered in the Developer's Floodplain Encroachment Analysis which isn't sensible. Increased floodwaters have been overflowing from the Agua Caliente Wash moving North on Bonanza Avenue towards the Forest Grove Loop neighborhood. In addition, the floodwaters from the Agua Caliente Wash crossing Bonanza Avenue have been entering the Isabella Lee Nature Preserve and onwards to the Lakes at Castle Rock neighborhood over the past 5+ years. In 2010, Pima County Regional Flood Control District commissioned a hydrological study (#FP-059-2010) of the Castle Wash watershed North of Bonanza Avenue, but the study did not cover Tanque Verde Road or the area going south towards Agua Caliente Wash and floodplain. The floodwaters cross Tanque Verde Road

FIRM REVISED 2012

Subject: Agua Caliente Wash - Community Protest on Changing the LOMR to a PMR

Dear Ms. Norton:

Pima County and the City of Tucson are in receipt of the June 28, 2010 letter from FEMA informing the communities that the Agua Caliente Wash Letter of Map Revision (LOMR), Case No. 09-09-2642P, will now be processed as a Physical Map Revision (PMR). We, as the floodplain administrators for the City of Tucson and Pima County, protest this move and formally request the map revision be finalized as a LOMR for the following reasons:

- All technical data has been submitted, reviewed and approved through Michael Baker Corporation.
- The LOMR application from the Pima County Regional Flood Control District (District) included ESRI shape files in FEMA's projection scheme to assist with the map creation.
- 3. There are significant changes to the Agua Caliente Wash which must be recognized and used for both floodplain management and flood insurance reasons which includes a corrected discharge downstream of Houghton Road. The existing regulatory discharge of 3,200 cfs was changed to 7,180 cfs. As a result the revision reflects increases in flood depths and floodway widths attributable to the more hazardous conditions.
- 4. All public outreach has been performed by the District. This includes newspaper notifications, individual notifications to 492 property owners, an open house meeting held on June 22, 2010, and the creation of a website: http://rfcd.pima.gov/reports/aguacalientelomr/.
- 5. In the City of Tucson there is one subdivision, two residential properties and one commercial property that are being engineered. In Pima County there is one preliminary subdivision plat and one property owner looking at a large multi-lot development that are being engineered. The LOMR process will ensure that these developments are built to the revised map limits.

Beth A. Norton, Program Specialist – Federal Emergency Management Agency
Agua Caliente Wash – Community Protest on Changing the LOMR to a PMR
July 8, 2010
Page 2

- 6. Using the data as "Best Available Data" does not modify the flood insurance zones and there are significant changes to the Special Flood Hazard Areas.
- Using the mapping information as "Best Available Data" does not inform the public on the increase in flood hazards as well as a FEMA approved LOMR would.
- 8. FEMA Region 9 has not secured funding to process the Agua Caliente map revisions as a PMR. Furthermore, FEMA Region 9 has yet to resolve a protest on the next D-FIRMs which will delay those FIRMs well into next year. The PMR process for the Agua Caliente Wash could not be made until after the new FIRMS are issued, adding to the delays with the mapping Agua Caliente flood hazards.

If you have any questions or need additional information, please contact Terry Hendricks, Chief Hydrologist, Planning and Development Division, at (520) 243-1800.

Sincerely,

Suzanne Shields, P.E.

Director and Chief Engineer

Pima County Regional Flood Control District

Flood Modeling: How Accurate is Your Model?

Chris Huxley, TUFLOW (chris.huxley@tuflow.com)
Phillip Ryan, TUFLOW (phillip.ryan@tuflow.com)

Flood modeling is a cost-effective tool for informing all aspects of floodplain management. Flood mitigation assessments, land use planning controls, infrastructure design and even flood insurance classifications are all directly impacted by the precision and accuracy of the flood modeling on which they are based. With this in mind, it is prudent that our flood estimates are accurate, if for no other reason than to avoid costly overdesign, or worse, unexpected and potentially dangerous under-design.

There are numerous factors that contribute to inaccuracy in flood model results; technical guidelines, software certification, engineer certification/sign off all aim to minimize error in modeling activities. Unfortunately these safeguards provide no tangible measure for determining whether model results are correct. Models can be built to guideline specification, though still produce inaccurate results due to reasons such as; over simplifying assumptions within the chosen hydraulic modeling software, input data quality issues and/or model schematization errors. The most effective method to measure a flood model's performance is through calibration to past historic events. For this reason, all flood engineers should place significant emphasis on model calibration.

Many agencies recognize this need and require model calibration to varying degrees. This article briefly discusses some related topics worthy of consideration by agency officials, floodplain managers and consulting engineers.

Calibration Flood Event Selection

Appropriate historic event section is critical. Ideally, model calibration should be completed using multiple historic events of varying magnitude.

- Calibration to small in-bank flood events is useful for testing whether the dominant conveyance
 zones are represented adequately within the flood model. Past experience has found model
 refinement to achieve calibration for an in-bank event is recommended prior to out-of-bank
 calibration. This staged calibration approach allows for focused refinement of the in-bank model
 features before consideration of broader floodplain features.
- 2. Calibration to larger events with significant out-of-bank floodplain inundation tests three critical elements of a flood model: the interchange of flow between the river and floodplain, floodplain storage and flow resistance across the floodplain due to spatial variation in vegetation density.

In addition to magnitude, event selection should also consider data availability, events of historic significance and event recency. Community recollection of these events is typically greatest. If a flood model can reproduce known flood behavior it builds community "trust" in the model's performance. Furthermore, calibration to recent events demonstrates that the model adequately represents the current catchment conditions. This is particularly relevant for models that will be used for design flood estimations following calibration.

Hydraulic modeling software that is founded on the equations of fluid flow and successfully benchmarked should readily replicate the historic flood behavior for the full range of flood events without requiring adjustment of model parameters unless the parameter is event specific. Examples of event specific parameters are the hydrologic inputs (rainfall intensity, duration, spatial distribution, antecedent conditions) and significant physical changes within the catchment that require back dating in the model (land use changes or major topographic updates such has road upgrades). All other model inputs and parameters should be consistent across all historic calibration events. It is

symptomatic of either; software inadequacies, data quality issues and/or model schematization errors if calibration to varying magnitude events cannot be achieved using this approach. For example, unless physically justifiable due to changes in vegetation, in-bank Manning's n value would not be expected to change between events.

Model calibration can be one of the most challenging of all hydraulic modeling tasks. It requires an indepth understanding of hydraulic principles and also knowledge of the chosen software's limiting assumptions. Engineers new to model calibration should approach the process with a critical mind. If your model doesn't calibrate well, confirm the model inflows are correct, double check the accuracy of topographic datasets (particularly hydraulic controls such as raised road embankments), review/sensitivity test your model parameterization, and seek advice from experienced modelers and/or your software provider. Also consider the vertical, spatial and temporal accuracy of your calibration dataset.

Calibration can be very satisfying when all the pieces align. Be wary of, and avoid, immediately explaining poor calibration by creative reasoning focused on why recorded datasets are inaccurate. You will miss the learning opportunities that come with model calibration, and worse yet create a model that doesn't reflect true flood behavior!

Calibration Methods

Calibration Approach	Comment
Neighboring catchment	This type of comparison is not a reliable form of model calibration. It does not
outflow or regression	provide a measure of a models flood level prediction performance. There is,
equation flow comparisons	however, still value in the comparison approach as a basic form of anecdotal
	quality assurance check.
River gage water level time series comparison	This is an excellent measure of a models performance in the main channel. The calibration should focus on replicating the rising limb, falling limb, and flood peak. Note, good calibration in the river channel does not automatically translate to good calibration in the floodplain (see below). Calibration to multiple gages is essential to demonstrate the model correctly reproduces the travel time and flood wave attenuation down the river. Achieving a satisfactory match at gages is reliant on the hydrologic inflows also being calibrated or
	correct. Preferably calibration of the hydrologic modeling is carried out jointly with the hydraulic model calibration as the accuracy of the hydrologic modeling will directly affect the accuracy of the hydraulic modeling.
Floodplain peak water level	Peak water level calibration to debris marks in the floodplain should
/debris mark comparison	supplement gauge water level time series calibration. Properties in the
,	floodplain represent the sensitive receptors in most flood modeling
6:	assessments. As such, flood level result accuracy is paramount in the floodplain.
	Inundation in the floodplain can often be offset from levels in the river channel. Perched river embankments or levees regulate the volume of flow entering the floodplain. Floodplain storage and variations in vegetation density determines the flood behavior within the floodplain. Calibration to surveyed peak water level and debris marks are the best available method to confirm whether these features are correctly defined in the flood model and the models results are accurate.
Anecdotal observation	Anecdotal observations are useful. This could include information such as the
verification	timing of backflow up tributaries or when flooding overtopped or breached a significant river embankment or levee.
Flood frequency analysis comparison	Design event hydrology is a potential source of predictive uncertainty. Design flood model result comparison against a gage flood frequency analysis is a useful method to reduce this uncertainty.

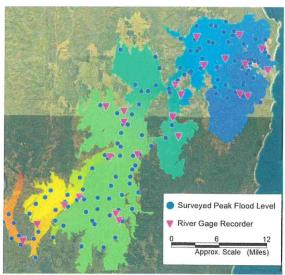

Calibration Data

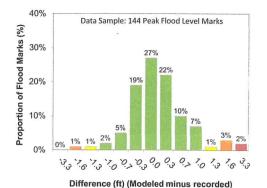

Flood model calibration requires accurate historic flood records. Experience has shown that calibration data is sparse and in some cases unreliable in some locations. Agencies responsible for flood planning within the USA should be aware of the potential implications of this data shortage.

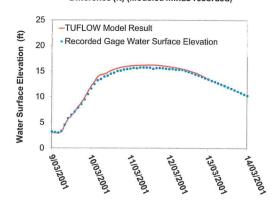

Post flood event datasets requiring collection and archiving include; rainfall pluviograph and river gage water level and /or flow time series data, surveyed floodplain peak water level /debris mark information and anecdotal observations. Metadata should be associated with each dataset to provide some comment of its reliability / accuracy. The metadata information is particularly useful during flood model calibration years after an event has occurred.

The regional nature of floods often mean their impact extend well beyond county and city boundaries. For this reason, joint agency collaboration following an event is often the most appropriate and cost effective approach to data collection efforts. In NSW, Australia, the State department funds and manages post event data collection efforts. Local agencies work with the state, and are responsible for collecting on-ground data (such as surveyed peak water level and debris marks). This joint State / Local agency approach is multi-beneficial:

- Data collection immediately following an event increases the data accuracy. Particularly for floodplain peak water level / debris mark survey. It also identifies significantly more flood marks compared to community surveys undertaken years after an event. Some catchments within Australia have over 1,000 surveyed peak flood level recordings from a single event. This data coverage is invaluable!
- The State managed process ensures data quality and format consistency.
- Recent social psychology research suggests the
 personal interactions between the affected
 community and local agency officials responsible
 for the on-ground data collection have positive
 psychological benefits. It helps with their recovery,
 from what in many cases is a traumatic experience.

 Conference Keynote address, Nowra 2016)

Conclusion

The accuracy of our flood models is of utmost importance for financial planning and also public safety. Model calibration is the most effective approach to verify the predictive accuracy of a flood model. All professionals associated with the floodplain management industry; including agency officials, floodplain managers and consulting engineers should give model calibration a high priority.

2D modeling guidelines have been a topic of discussion for some time in the USA. We hope any guidelines that are created give due emphasis to model calibration and all agencies in the industry recognize the benefits associated with data collection efforts needed to support model calibration.
